How to Install Cabinet Doors
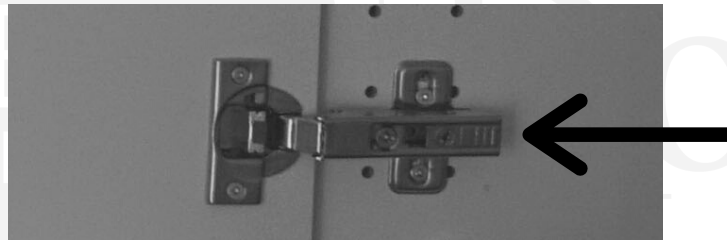

1 Open the door fully.

2 European hinges have a clip on the end. This clip is closest to the back plate. Pull the clip toward the inside of the cabinet and hold.

3 Remove the hinge by pulling it towards you.

4 Secure the door firmly while repeating steps 2 and 3 for all other hinges.
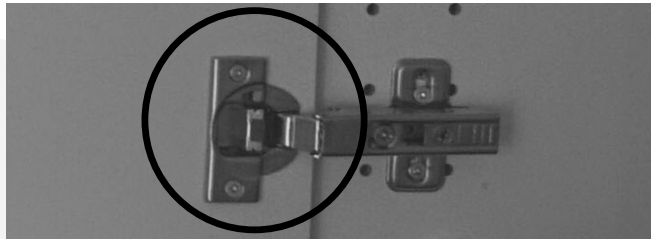

5 If needed, unscrew and remove the back hinge plate.

6 Remove all hardware from the old door to be installed onto the new door. If you are installing new hardware, skip this step.

7 Place the new or existing hinges in the hinge cup holes and secure with screws.

8 Open the hinge fully and align it with the hinge back plate. Secure the front hook and snap the back hook into place.

9 Align hinges with the provided screw alignment.
